Professional Experience

Rehman Life store

Administrative., April 2018-march 2019

- Manage all the backend queries on SQL server 2008.
- Manage all the products and its information that we provide to the sales counter person and that person scan the product and get information from backend SQL server.
- I also manage the audit process of whole wear house all the balance pattern of products and its amount.
- I also manage salary and complete accounts manage through SQL database.

University final year project

Face recognition by Static image, June 2018-june 2019

- We develop an application in which we create a pre defined database that contains information of 100 people.
- In front end user view we provide rescue and police option that will be authorized person to use this application.
- The user uploads an image by using upload option from front end interface and that tap on search button.
- Our program match image into the data base and get result related to an image.
- This application is usually built for child and old psycho patient that recently missed by his/her home.
- We use bootstrap, HTML, CSS, python and SQL server 2008 for build this application

Hospital management system

Patient info only and appointment ,Jan 2020- Feb. 2020

- We develop an application in which we create login and registered option for receptionist.
- In which patient can be registered its appointment by the receptionist.
- After appointment patient will meet with appointed doctor.
- And we also provide data base data onto front end page according to which the receptionist check appointment of patient and send patient o doctor.
- We use ASP.Net MVC and SQL server 2008 bootstrap 4 HTML 5 CSS 3for build this application.
